

Desktop Preset Guide

1. DOWNLOAD THE XMP LIGHTROOM DESKTOP FILES

Once you have purchased your presets, you will be sent an email with instructions on how to download your presets. Download the files into a suitable place, so you can easily import them to Lightroom Classic CC

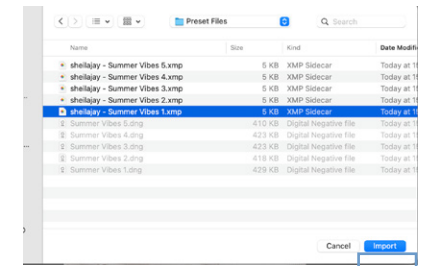

2. LOADING YOUR PRESET INTO LIGHTROOM

Open the Adobe Lightroom Classic on your computer and click on the **'Develop'** tab. In this tab you will be able to see the presets panel on the left. Click on the plus sign and click the **'Import Presets'**

3. OPEN YOUR PRESET FILES

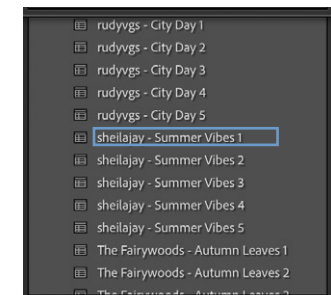

After clicking on **'Import Presets'** a window will appear for you to select the presets you would like to import from your computer. Locate the correct files and click **'Import'**. Once they have been imported, you will see them on the side panel saved in **'User Presets'**

4. HOW TO USE THE PRESETS

Once saved, you can go back to the 'Library' tab to import your own photos. After importing your own photos, you can select the photo you would like to edit and select the preset you would like to use from the presets panel.

**Please note, while all presets have been designed and tested to work on most photos, some small adjustments may need to be made to the contrast or exposure depending on the lighting of your image.*

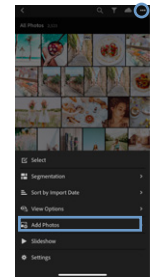

Mobile Preset Guide

1. TRANSFER DNG FILES INTO YOUR DEVICE

Once you have purchased your presets, you will be sent an email with instructions on how to download your preset. Once you have downloaded your DNG mobile preset files, please transfer them to your device. This can be done by emailing them to yourself, or transferring via Google Drive or iCloud Drive.

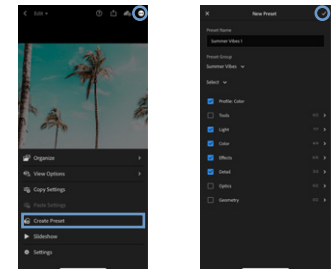

2. LOADING YOUR PRESET INTO LIGHTROOM

Open the Adobe Lightroom app on your phone and click the three dots in the right hand corner to select **'Add Photos'** and import your presets from your camera roll. It's okay if your presets show up with as a grey square on your camera roll. They will still work once you have uploaded them to Lightroom.

3. SAVING YOUR PRESETS

After you have opened preset in Lightroom, select the photo and click on the three dots in the right hand corner again and select **'Create Preset'** from here you will be able to add a name to your preset. Once complete click the checkbox in the top right corner.

4. HOW TO USE THE PRESETS

To use your new preset, import a photo you would like to edit and select it. Once it's selected, scroll all the way over to the right on the tools panel and select the **'Presets'** button. From here you will be able to select your newly downloaded presets and edit your photos in just one click!

**Please note, while all presets have been designed and tested to work on most photos, some small adjustments may need to be made to the contrast or exposure depending on the lighting of your image.*
